CLAYENS MEXICO REPORTS RECORD RESULTS FROM ITS EXPANSION PROJECT!

The Clayens Mexico plant is already drawing a very positive operational result for its expansion project launched 2 years ago.

Located in a dynamic region (Coahuila) and benefiting from a real proximity with its customers in Mexico and USA, the Clayens Mexico plant located in Torreon has built its new extension in just 6 months from the launch of the project. The new building is made of 2 new manufacturing areas (thermoplastics/thermosets), a new maintenance workshop for 15 people and a new metrology area, both equipped with state-of-the-art equipment. In addition to these production areas, this extension includes a 3500 m² logistics area.

In few months, The plant managed to received nearly 45 new injection molding machines: the first 20 machines were installed at the beginning of 2022 as part of a transfer of a complete workshop for the aeronautics industry, and the other 25 were installed afterwards to accompany the growth in customer needs. The plant has now 87 injection molding machines.

The challenge was also in human resources, both in terms of management and production staff.

"The first injection molding machine of the extension arrived exactly 6 months after the first foundation stone, as we had promised. And even our customers were surprised by the speed of this execution", explained Gérard DIDIENNE, General Manager of Clayens Mexico. "We have a real strategic asset for our customers and we are still seeing an increase in demand. We have other expansion projects in the pipeline, especially to increase our ISO7 and controlled environment capacity for Healthcare and other markets."
